SUBJECT INDEX

Airglow

Observations of the airglow continuum, *J. R. Sternberg and M. F. Ingham* ... 1
Photochemistry of the airglow continuum, *J. R. Sternberg* ... 21

Astrometry

Precise positions of radio sources measured at 2695 MHz, *R. L. Adgie, J. H. Crowther and H. Gent* ... 233

Celestial mechanics

The Earth's acceleration as deduced from al-Biruni's solar data, R. R. Newton (*Summary of Memoirs*, Volume 76, Part 4) ... 453

Cosmology

Exact expressions for the properties of the zero-pressure Friedmann models, *D. Edwards* ... 51
The cosmological evolution of radio sources of large angular extent, *B. L. Fanaroff and M. S. Longair* ... 119
A non-uniform relativistic cosmological model, *W. B. Bonnor* ... 261
The interaction of primordial gravitational waves with groups of galaxies, *M. J. Rees* ... 7P

Galactic structure and stellar dynamics

Experimental trigonometric parallaxes in the Hyades region using a Schmidt telescope of moderate size, *A. N. Argue and C. M. Kenworthy* ... 31
Galactic rotation and the precession constant, *S. V. M. Clube* ... 289
Radiation-driven efflux and circulation of dust in spiral galaxies, *R. Y. Chiao and N. C. Wickramasinghe* ... 361
Proper motions of field M stars in the region of the Pleiades, *B. F. Jones* ... 3P

Galaxies

The interaction of primordial gravitational waves with groups of galaxies, *M. J. Rees* ... 11P

PAGE

High frequency radio observations of optically interacting galaxies, *C. R. Purton and A. E. Wright* 15P
Inclination corrections to the optical luminosities and diameters of galaxies, *R. Brent Tully* 35P

General relativity

Limits of gravitational radiation from two gravitationally bound black holes, *G. W. Gibbons and Bernard F. Schutz* 41P

Instruments and techniques

Experimental trigonometric parallaxes in the Hyades region using a Schmidt telescope of moderate size, *A. N. Argue and C. M. Kenworthy* 31

Interstellar medium

Interstellar circular polarization, *P. G. Martin* 179
Discovery of interstellar circular polarization in the direction of the Crab nebula, *P. G. Martin, R. Illing and J. R. P. Angel* 191
On the injection of grains into interstellar clouds, *N. C. Wickramasinghe* 269
Radiation-driven efflux and circulation of dust in spiral galaxies, *R. Y. Chiao and N. C. Wickramasinghe* 361

Nebulae—gaseous

Observations of recombination lines at decimetre wavelengths, *A. Pedlar and R. D. Davies* ... 129

Physical processes

Photochemistry of the airglow continuum, *J. R. Sternberg* 21
Interstellar circular polarization, *P. G. Martin* 179
The effect of meteoric ion processes on radio studies of meteoroids, *W. J. Baggaley* ... 203
On the injection of grains into interstellar clouds, *N. C. Wickramasinghe* 269
Radiation-driven efflux and circulation of dust in spiral galaxies, *R. Y. Chiao and N. C. Wickramasinghe* 361
A modification and criticism of Petschek's mechanism, *E. R. Priest* 389
The interaction of primordial gravitational waves with groups of galaxies, *M. J. Rees* ... 11P

Quasars

Quasars as images of Seyfert nuclei, *L. N. K. de Silva* 219

Radio astronomy

The cosmological evolution of radio sources of large angular extent, *B. L. Fanaroff and M. S. Longair* 119
Observations of recombination lines at decimetre wavelengths, *A. Pedlar and R. D. Davies* 129
The effect of meteoric ion processes on radio studies of meteoroids, *W. J. Baggaley* 203
Quasars as images of Seyfert nuclei, *L. N. K. de Silva* 219
Precise positions of radio sources measured at 2695 MHz, *R. L. Adgie, J. H. Crowther and H. Gent* 233
High frequency radio observations of optically interacting galaxies, *C. R. Purton and A. E. Wright* 15P
The ratio of two flux density scales at 408 MHz, *R. G. Conway and R. E. B. Munro* ... 21P

Spectroscopy

Photometry and spectroscopy of red variables in Omega Centauri, *R. J. Dickens, M. W. Feast and T. L. Evans* 337
A spectroscopic study of the blue globular clusters in the Large Magellanic Cloud, *P. J. Andrews and T. L. Evans* 445

Star clusters

Experimental trigonometric parallaxes in the Hyades region using a Schmidt telescope of moderate size, *A. N. Argue and C. M. Kenworthy* 31
The cluster NGC 330 in the SMC (Paper II): Hα emission in main sequence stars, *M. W. Feast* 113
Photometry and spectroscopy of red variables in Omega Centauri, *R. J. Dickens, M. W. Feast and T. L. Evans* 337

PAGE

Electronographic photometry of star clusters in the Magellanic Clouds—IV. The colour–magnitude diagram of NGC 419, *M. F. Walker* 379
A spectroscopic study of the blue globular clusters in the Large Magellanic Cloud, *P. J. Andrews and T. L. Evans* 445

Stars—chemical composition

V553 Centauri: a Type II Cepheid with an overabundance of carbon, *T. L. Evans, P. N. J. Wisse and M. Wisse* 67
A non-LTE analysis of the O-type subdwarf, HD 49798, *P. L. Dufton* 79
The analysis of the Small Magellanic Cloud supergiant HD 7583, *A. Przybylski* 155
The barium and R type stars, *O. J. Eggen* 403
A second CH star in Omega Centauri and the C^{12}/C^{13} ratio, *R. J. Dickens* 7P
On the atmosphere of the star HD 103877, *D. J. Stickland* 29P

Stars—photometry of

Four-colour and Hβ photometry of some bright southern stars, *N. R. Stokes* 165
Photometry and spectroscopy of red variables in Omega Centauri, *R. J. Dickens, M. W. Feast and T. L. Evans* 337
The application of synthetic spectra to colour system transformations—I. The *RGU* and *UBV* systems, *R. A. Bell* 349
The application of synthetic spectra to colour system transformations—II. The photographic and photoelectric *UBV* systems, *R. A. Bell* 357
Electronographic photometry of star clusters in the Magellanic Clouds—IV. The colour–magnitude diagram of NGC 419, *M. F. Walker* 379

Stars—Variable

V553 Centauri: a Type II Cepheid with an overabundance of carbon, *T. L. Evans, P. N. J. Wisse and M. Wisse* 67
Observations of rapid blue variables—VIII. The companion to Mira, *B. Warner* 95
Observations of rapid blue variables—IX. AM CVn (HZ 29), *B. Warner and E. L. Robinson* 101
Observations of rapid blue variables—X. G61–29, *B. Warner* 315
Observations of rapid blue variables—XI. DQ Herculis, *B. Warner, W. L. Peters, W. B. Hubbard and R. E. Nather* 321
Photometry and spectroscopy of red variables in Omega Centauri, *R. J. Dickens, M. W. Feast and T. L. Evans* 337
A comment on the use of the displacement potential in pulsational analysis, *G. J. Vaughan* ... 375
Observations of rapid blue variables—XII. UX Ursae Majoris, *B. Warner and R. E. Nather* 429
On the reality of the ~165-s ' period ' in the variation of Sco X–1, *J. Gribbin* 1P
Multiple periodicities in the white dwarf HL Tau-76, *C. G. Page* 25P

X-ray astronomy

HD 152667 and Sco X–2, *E. N. Walker* 253
